

Reduce Service Desk cost

Promote user productivity

Increase end-user service

Enhance security

FastPass Windows XP client

Professional Password Self-Service for organizations with a Microsoft Windows infrastructure.

FastPass Entry covers all the essentials for professional organizations to introduce Self Service password management fast and effectively.

With FastPass Entry you will remove the workload associated with solving password related inquiries from the IT Service Desk. FastPass Entry enables users to swiftly and securely reset or change their password and unlock their account with no need for any involvement from the IT Service Desk.

FastPass Entry is easy to install and easy to use and is aimed for small to medium sized organizations with a Microsoft Windows infrastructure.

SOLUTION OVERVIEW:

Windows Client

The FastPass Windows Client enables users to log-on to the server in a forgotten password situation. FastPass adds a "Forgot Password" button to the Windows log-on screen which the user will click on in a forgotten password situation.

Password Reset

When a user clicks on the Forgot Password button he is directed to the FastPass application. He will reset his password in a few easy steps. First the user enters his user-id and then identifies himself using for instance challenge/response authentication. If required he may also be prompted to add a one-time pin code that FastPass sent to his mobile phone. This is normally referred to as strong authentication.

The user then types in a new password. Once the new password has been validated against the password policy in Active Directory, the user can go back to the login screen and login again. All in the means of seconds.

Account Unlock

In a situation where an account has been locked, the process is exactly the same as in the Password Reset situation. The authentication method may differ though dependant on company policy and the authentication profile.

Installation

The product installs in your *existing* Windows Server environment in just a few hours. After ordering FastPass Entry you will receive a license file. The FastPass installation wizard will guide you through the FastPass Entry installation on top of your Microsoft Active Directory. FastPass Entry is providing a secure infrastructure for password handling and will need a valid certificate to be available on the domain. Upon installation you decide if the preconfigured configuration is in line with your requirements. If not you will change the configuration parameters in the admin console. You then decide which users & groups you will be offering password self-service, and so - off you go - you're ready to introduce self-service password management in your organization.

Other FastPass Editions:

FastPass is also available in two extended Editions for organizations with a need for more feature rich solutions or a need to support more complex environments.

The FastPass Enterprise/Service Provider Edition supports not only multiple domains and multiple forests but is also capable of handling more organizations.

This Edition also adds connectivity to more target platforms which allow users to reset passwords and unlock accounts across a broad variety of platforms and applications. A Generic connector is also available and extends the reach of the solution, to also let you incorporate homegrown applications into FastPass Password Manager.

FastPass Enterprise/Service Provider Edition is setting the standard for Password management in Enterprises and Managed Service Provider environments. For more information on supported connector environments please refer to the FastPassCorp corporate website.
